

Dashboard 4.13.0 Release Note

Dashboard 4.13.0 - 10 Aug 2017

Dashboard 4.13.0 is a minor release, which includes new features, improvements, and several bug fixes.

New features

- For Pro or Enterprise organizations, there is now a link to App Preview on the App left-hand menu
- For Pro or Enterprise organizations, there is now a link to Query Builder in the Analytics left-hand menu
- Added support for on-demand training purchases

Improvements

- Improved sign-up and activation processes to reduce steps to completion and indicate progress through the onboarding flow
- Email notifications are now sent when user accounts have been modified
- Updated email templates and simplified verbiage
- Revised Terms of Use for users of the trial, Indie, and Pro organizations
- Updated Quick Start (tools), Titanium, CLI, Studio, and API Builder product page content and layout
- Updated the [API Builder Getting Started Guide](#) page
- Updated the Studio product page to show hardware requirements, supported macOS and Windows versions, and recommended Linux kernel versions

Fixed issues

- Fixed issue with Mobile Backend Services (ArrowDB) usage view to display file and database storage usage for the current month and prior month
- Fixed issue with display of database storage value
- Fixed issues with push notification log pagination and filtering
- Improved performance of Installs and Sessions metric on App Analytics view
- Fixed issue to handle very small usage values (e.g. < 0.01 GB)
- Fixed issue with display of unsupported browser page and updated list of supported browsers
