

AMPLIFY Dashboard

- Why AMPLIFY?
- How does AMPLIFY do it?
- What does AMPLIFY offer?
- AMPLIFY products and services

Axway AMPLIFY is a data integration and engagement platform that achieves higher levels of efficiency and growth by transforming rigid and manual connections between people, businesses, and machines into customer experience networks.

Why AMPLIFY?

Integration shouldn't hinder your business and customer success.

AMPLIFY makes integration an barrierless experience.

How does AMPLIFY do it?

Aside from offering a seamless experience across legacy software, cloud, shared services, and hybrid deployment methods, AMPLIFY provides a marketplace where you can find products and services to accelerate solution delivery. In addition, the AMPLIFY Marketplace provides a platform you to co-create, share, and monetize your services and products in the Axway ecosystem.

AMPLIFY is bolstered by a large [Developer Community](#) where you can find tutorials, videos, how-tos, and the latest events in the integration space. Connections to experience technology professionals is only seconds away.

What does AMPLIFY offer?

AMPLIFY offers API-first integration with multiple on-ramps from existing applications, cloud and enterprise mobility, and priced as you grow while capable of supporting modern enterprise application architectures.

AMPLIFY products and services

AMPLIFY allows you to build and manage apps and APIs with the following Axway/Appcelerator products and/or services:

- **App Builder:** Get started building cross-platform mobile apps with Titanium, CLI, and Studio. See [Titanium SDK](#), [Appcelerator CLI](#), and [Axway Appcelerator Studio](#) for their respective documentation.
- **API Builder** - A powerful framework for building and running APIs and microservices
- **Dashboard:** Full lifecycle visibility and real-time insights for all your apps and APIs
- **Mobile Backend Services:** Pre-built services like push notifications, noSQL, geo-location, and more
- **API Central Service (Public Cloud) Getting Started Guide:** Cloud native full-lifecycle API management and governance
- **API Management:** Deploy your own API Management solution
- **Business Event Service:** Automation for Service Delivery Teams
- **Search Service:** Search service is a modern, big data-architected tool for high-velocity capture, high-volume storage, efficient indexing, and easy search and retrieval
