Flow Examples

This topic provides examples of using the flow editor on the API Orchestration user interface to create flows and configure and connect the flow-nodes in a flow. The examples use the Swagger definition import of the simple user application endpoints. For additional information on importing endpoints, refer to the Importing endpoints section of Manage Endpoints. The following flow examples are provided:

- Count Users
- Create a User
- Delete All Users
- Delete a User
- Find a Distinct User
- Find All Users
- Find and Modify Users
- Find a User by ID
- Query a User
- Update a User
- Upsert a User
