

Adding PHP Ruby or Python Support

Support for server-side languages is optional. To add them to Studio:

1. Launch Studio.
2. Go to **Help > Install New Software....**
3. Enter the following URL in the **Work with:** field:
 - **PHP** - <http://download.appcelerator.com/aptana/studio3/php/update/stable>
 - **Ruby** - <http://download.appcelerator.com/aptana/studio3/ruby/update/stable>
 - **Pydev** - <http://download.appcelerator.com/aptana/studio3/pydev/update/stable>
4. Check the top level node in the table and go through the wizard to install.
