

Appcelerator Dashboard

Introduction

AMPLIFY Dashboard (Appcelerator Dashboard) is a web application you use to manage all aspects of your AMPLIFY Appcelerator Services development. You can manage Titanium applications, as well as iOS and Android applications built with Objective-C (or Swift) and Java. It enables you to create, deliver, analyze, and manage your mobile apps. Using the Dashboard you can do the following:

- Manage client applications, including Android and iOS application
 - Register an Android or iOS application with the AMPLIFY Appcelerator Services (see [Managing Non-Titanium Client Applications in Dashboard](#))
 - Download the AMPLIFY Appcelerator Services SDK and Appcelerator Studio
- Manage organizations and application teams (see [Managing Organizations](#))
- View application metrics and analytics (see [Managing Client Applications: Analytics](#))
 - View key metric counts and trends
 - Track user engagement, retention and feature usage for your application
 - Create and monitor event "funnels" to monitor critical user flows
- Monitor Cloud API usage for each application or for an organization as a whole
 - Add, modify and delete Cloud objects for specific applications (see [Managing Mobile Backend Services data objects](#))
 - Configure push notifications services (see [Configuring Cloud Services](#))
 - View API Builder application statistics (see [Viewing Custom Cloud Services](#))
- Monitor application health, crashes and overall performance (see [Application Details Screen: Performance](#))
- Manage test cases (see [Getting started with Test](#))
 - Create and run tests
 - View test results
 - Create and run automated tests using the Test service

Browser and Mobile OS Support

Dashboard supports the following desktop browsers and mobile operating systems:

- Google Chrome 55+
- Mozilla Firefox 52+
- Safari 7+
- Internet Explorer 11
- Microsoft Edge 13+
- iOS 5+
- Android 4+

If you try to open the Dashboard in an unsupported browser or if your browser width is too small, you will receive a warning message.

Next steps

To start using Dashboard, please review the [Appcelerator Dashboard Getting Started](#).
