

Modifying Your Configuration

Overview

This guide explains the steps for modifying your configuration file.

Modifying the INI Configuration File

1. Locate the INI configuration file:
 - a. **Mac OS X:**
 - i. Navigate to the `/Applications/Appcelerator Studio` folder in Finder.
 - ii. Right-click (or control-click) on `AppceleratorStudio.app` and choose Show package contents.
 - iii. In the new Finder window, navigate to `Contents/MacOS`.
 - b. **Windows:** Navigate to the location of your Studio application (likely under `C:\Users\username\AppData\Local\Appcelerator Studio`).
2. Open `AppceleratorStudio.ini`.
3. Edit the options as desired.
4. Save and close the file.

You can follow the same procedures on Eclipse. The folder structure will be identical, but the file to edit is **eclipse.ini**.
