

Axway Appcelerator Studio Getting Started

Axway Appcelerator Studio is an Integrated Development Environment (IDE) to build an enterprise-level cross-platform mobile applications using the Titanium SDK. It's built based on the Eclipse, an open-source and most widely used IDE.

This guide contains a selection of tutorials that show you how to get started with the building cross-platform mobile application development using Axway Appcelerator Studio.

As part of the getting-started process, you go through the following steps:

1. Sign up at <https://platform.axway.com>.
2. Go through [Studio System Requirements](#).
3. Complete the steps in [Download and Install Studio](#).
4. Follow the instructions in [Install Platform SDK's](#) for your preferred platform (iOS, Android, and Windows).
5. Develop your first Titanium App. Get started with the sample [Hello Titanium App](#).

If you're coming from the background of Aptana Studio or Titanium Studio, please check the comparison [here](#). However, Titanium Studio is replaced with the Appcelerator Studio to support enterprise and professional mobile app development features.

If your work is primarily web application development, we recommend installing the standalone [Aptana Studio](#); if your work also involves Java development, we recommend installing [Aptana Studio as an Eclipse plugin](#).

Have an older version of Appcelerator Studio installed? Please review [Updating the Current Version](#).
