Confirming the Association of an IdP to the Domain

Sequence	Completed task to configure and enable an IdP		
1			Add a domain and
			Verify domain ownership
		Configure an OIDC or SAML v2.0 IdP	
	Step 1 tasks (add and verify a domain, or configure an IdP) can be completed in any order		
2	Confirm the association of an IdP to the domain		
3	- Enable the IdP configuration for all domain users		
4	- (*Optional*) Add a subdomain		

After domain ownership is verified and an OpenID Connect (OIDC) or SAML v2.0 Identity Provider has been configured, a selected user on the domain must confirm the association of the Identity Provider to the domain.

1. For the domain you want to confirm, select **Confirm IdP Association** from the **Actions (...)** menu from the **Email Domain** table.

2. The **Confirm Domain Association** modal dialog displays. The association of the domain to the configured Identity Provider must be confirmed. Do the following:
   a. Select a user's email address to validate the association in the **Verification Recipient** field.
   b. Select the Identity Provider to which the domain is associated in the **Identity Provider** field.
   c. Click **Send Verification Email**.

Confirm Domain Association   ✕

You must now confirm the association of the **example.com** domain to your configured Identity Provider. Please select a user to validate this association. If the user you wish to use is not displayed, you will need to invite them to the organization.

Once the verification email has been sent, **the selected user will be signed out of the Amplify Platform and required to authenticate using the configured Identity Provider.**

If the Identity Provider configuration is not valid, an organization administrator will need to correct or remove the configuration before the selected user will be able to access the Amplify Platform.

Cancel   **Send Verification Email**

3. The verification recipient will be logged out of the Platform and will receive an email from the Axway AMPLIFY Platform to confirm domain ownership. The user must click the link in the email they receive to be taken to the login page of the configured IdP, where they must log in using the email address where they received the confirm domain ownership link. The user is returned to the Platform where they receive a message that domain ownership has been successfully confirmed. They can then click **Continue to the AMPLIFY Platform** where they are logging into that organization.

Domain Association Confirmed 🔗

The association of the domain to your organization's Identity Provider has been confirmed. An organization administrator can now enable your Identity Provider for everyone on the domain.

Continue to the AMPLIFY Platform

After domain ownership is verified, the domain appears in the Email Domain table as **Associated** in the **Associated** column and **Pending** in the **Confirmed** column.
