

Adding a Subdomain

Sequence	Completed task to configure and enable an IdP
1	Add a domain and
	Verify domain ownership
	Configure an OIDC or SAML v2.0 IdP
	Step 1 tasks (add and verify a domain, or configure an IdP) can be completed in any order
2	Confirm the association of an IdP to the domain
3	Enable the IdP configuration for all domain users
4	(Optional) Add a subdomain

Once ownership is confirmed for a domain, any subdomains can be added without ownership having to be confirmed. The organization administrator can add the subdomain by selecting **Add subdomain** from the **Actions** (...) menu in the *Identity Providers* page.

Add Subdomain ✕

Associate a subdomain of **example.com** that is also controlled by your Identity Provider.

As ownership of the **example.com** domain has already been confirmed, you will not need to confirm ownership of the subdomain.

Subdomain

.example.com
